C, Function:
A, Map position: 1943.4-1943.4

C, Function:
A, Description: catalyzes hydrolysis of peptidyl-phosphotyrosine to peptidyl-tyrosine and C, Superfamily: protein-tyrosine-phosphatase, receptor type J; fibronectin type III repet C, Superfamily: protein-tyrosine-phosphoric monoester hydrolase; receptor; train F; 1-35/Domain: signal sequence #status predicted <SIG-P, 1-35/Domain: signal sequence #status predicted <SIG-P, 1-35/Domain: fibronectin type III repeat homology <3FNA-F; 1-35/Domain: fibronectin type III repeat homology <3FNB-F; 1-35/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-445/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-445/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-617/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-617/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-617/Domain: fibronectin type III repeat homology <3FNB-F; 1-35-35/Domain: fibronectin type III
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A,Molecule type: mRNA

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Marcusson, Eric G.
APPLICANT: Watt, Jacqueline
APPLICANT: Marcusson, Eric G.
APPLICANT: Marcusson, Eric G.
APPLICANT: Application and Antisense Compound Modulation of Fas Mediated Signaling
TITLE OF INVENTION: Antisense Compound Modulation of Fas Mediated Signaling
TITLE REPRENENCE: ISPH-545
CURRENT APPLICATION NUMBER: US/09/802,669
CURRENT APPLICATION NUMBER: US 09/665,615
PRIOR APPLICATION NUMBER: US 09/65,615
PRIOR APPLICATION NUMBER: US 09/65,615
PRIOR APPLICATION NUMBER: US 09/65,615
SPRIOR PILING DATE: 1999-04-12
SOFTWARE: Patentin Ver. 2.0

Sequence 46, Application US/09290640

Patent No. 6204055

GENERAL INFORMATION:
APPLICANT: Barcusson, Eric G.
TITLE OF INVENTION: Antisense Compound Modulation of Fas Mediated Signaling FILE REPERENCE: ISPH-0351

CURRENT APPLICATION NUMBER: US/09/290,640

CURRENT FILING DATE: 1999-04-12

NUMBER OF SEQ ID NOS: 85

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 46

LENGTH: 2485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 us-vy-e48-294-2

j Sequence 2, Application US/09848294

patent No. 6479640

GENERAL INFORMATION:

APPLICANT: Tonks, Nicholas K.

TITLE OF INVENTION:

TITLE OF INVENTION: Protein Tyrosine Phosphotase Which Localizes to Focal

TITLE OF INVENTION: Adhesions and Uses Therefor

TITLE OF INVENTION: Adhesions and Uses Therefor

FILE OF INVENTION: Adhesions and Uses Therefor

FILE OF INVENTION: Adhesions and Uses Therefor

FILE OF INVENTION: Adhesions and Uses Therefor

FILE OF INVENTION: Adhesions and Uses Therefor

FILE OF INVENTION: Adhesions and Uses Therefor

FRICR REPERROR: CSH190-04FZA

CURRENT FILING DATE: 1999-01-22

PRIOR APPLICATION NUMBER: 08/159,536

PRIOR FILING DATE: 1996-12-04

PRIOR PLING DATE: 1991-03-04-6

PRIOR PLING DATE: 1991-03-14

PRIOR APPLICATION NUMBER: 07/663,579

PRIOR APPLICATION NUMBER: 07/663,579

PRIOR FILING DATE: 1991-03-14

NUMBER OF SEQ ID NOS: 13

CSOTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 2

LENGTH: 913

TAVER: DOWN 100-1

WPI; 1999-009434/01. N-PSDB; AAV81744 New nucleic acid encoding specific protein tyrosine phosphatases - useful for identifying specific modulators for treatment and prevention of cancer and neurodegenerative disease.

Claim 2; Page 155-157; 193pp; English.

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence represents mouse PTP05. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPS) and are used to identify

```
substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polynucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                  121 IVKKSTGKSQCVKHLQFTKWPDHGTPASADFFIKYVRYVRKSHITGPLLVHCSAGVGRTG 180

The present invention describes isolated, enriched or purified nucleic acids encoding PTPO4, SAD, PTPO5, PTP10, ALP and ALK-7 proteins. The present sequence represents mouse PTPO5. The above proteins. The CALK-7, are protein tyrosine phosphatases (PTP9) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and that involve the proteins particularly cancer (e.g. leukaemia and serine/threonine kinase) are used to promote neuronal survival.

CC particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polymouleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the

acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 processors acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 processors. The present sequence represents mouse PTP05. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTP8) and are used to identify substances that modulate their activity (1.e. agonists and antagonists, including NBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction pathways that involve the proteins, particularly cancer (e.g. leukaemia and lymphoma), while modulators of ALK-7 (which is a type I receptor scrine/threonine kinase) are used to promote neuronal survival, and iseases. Nucleic acid fragments of the polynucleotides encoding the proteins and be used as probes to identify and clone related sequences; to detect protein-encoded RNA, to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the

syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis), or viral, bacterial, fungal, parasitic, protozoan or helminthic infections. The KPP is useful in assessing the effects of exogenous compounds on the expression of nucleic acids and kinases and phosphatases. KPP gene is useful in gene therapy and for creating transgenic animals to model human disease. The present sequence is human KPP protein The invention relates to an isolated polypeptide, which is a human kinase and phosphatase (KPP). KPP agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of KPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepaticis, parcxysmal neemoglobinuria, polycythaemia vera, psoriasis, primary thromobocycopaemia or cancer), developmental disorders (eg. renal thromobocycopaemia or mental retardation), neurological disorders (e.g. Allzehmer's disease, Parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. AllDs), aqquired immune deficiency syndrome, allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's disease, diabetees melliture, glomerulonephritis, Godpasture's syndrome, gout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoporosis, pancreatitis, Reiter's

```

The present sequence is human protein phosphatase (PP)-4. PP polymuclectide and polypeptide are useful in the diagnosis, treatment and prevention of immune system disorders, neurological disorders, developmental disorders and cell proliferative disorders. Examples of immune system disorders include acquired immune deficiency syndrome

Claim 1; Page 105-106; 116pp; English.

endometriosis; angiogenesis.

```
The present invention relates to a new human tyrosine phosphatase

Co polypeptide. The invention is useful for the preparation of a medicament

Co for modulating the activity of human tyrosine phosphatase in a disease

Such as obesity, diabetes, a central nervous system (CNS) disorder,

Co fronic obstructive pulmonary disease, cardiovascular disorder or cancer.

Co fronic obstructive pulmonary disease, cardiovascular disorder or cancer.

Co free invention is useful for treating a human tyrosine phosphatase

Co five invention is useful for treating the above mentioned diseases. The

invention is useful for treating the above mentioned diseases. The

CNS disorder is selected from Parkinson's disease, and the

cordiovascular disorder is selected from congestive heart failure and

cordiovascular disorder is selected from congestive heart failure and

confidential infarction. The molecules of the invention are useful in

cliagnostic assays for detecting diseases and abnormalities or

cusceptibility to disease and abnormalities related to the presence of

susceptibility to disease and abnormalities related to the presence of

mutations in the polymucleotide coding the polymeptide of the invention.

The present amino acid sequence represents the human tyrosine phosphatase

cordiovascular disvance of chromosome 10

cy tyrosine phosphatase gene located on chromosome 10
                                                                                                                                                                                                                                           New human tyrosine phosphatase polypeptide, the regulation of which is useful for treating obesity, diabetes, cardiovascular or central nervous system disorder, chronic obstructive pulmonary disease and cancer.
                                                                                                                                                                                                                                                                                                                                                                  Claim 25; Fig 2; 145pp; English

purplanease of the present invention mass cycleater, immensional presents, antidabetic, neuroprotective, antirhenmatic, antidarthic, antidateric, and antidated and antidated and antidated and treating cancer, e.g. paraceas, lung, ovarian, liver or colon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, cuch as autoimmune disease, diabetes mellitus, multiple sclerosis, rheumatoid arthritis, psoriasis, atherosclerosis, inflammation, scarring, endometriosis or angiogenesis, determining the effectiveness of drugs, determining patient prognosis, or as targets for screening pharmaceutical agents that inhibit the growth or metastasis of tumour cells. The present sequence represents the human cancer associated phosphatase The present invention describes an isolated cancer associated phosphatase nucleic acid. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer associated phosphatase, where the targets are associated with signal transduction in cancer cells; (5) a compound (C) for the treatment of a tumour; (6) a composition for the treatment of a tumour comprising a pharmaceutical carrier and (C); (7) methods for treating a tumour; and (8) a method for visualising a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, immunosuppressive,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NRDKNRYRDILPYDSTRVPLGKNKDYINASYIRIVNHEEEYFYIATOGPLPETIEDFWOM
                                                                                                                                                                                                                                                                                        novel gene; novel protein; tissue marker; molecular weight marker; chromosome marker; genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       VKKSTGKSQCVKHLQFTKWPDHGTPASADFFIKYVRYVRKSHITGPLLVHCSAGVGRTGV 181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynuclectides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially

The invention relates to isolated polynucleotide (I) and polypeptide (II) capences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of the control of the control of cactivity of (II) is useful in gene therapy techniques to restore normal cactivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of supplement. (II) and its binding partners are useful for treating disorders of supplement. (II) and its binding partners are useful for treating disorders of supplement. (II) and (II) are useful for treating disorders of supplement protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in the produce of matter of genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AbG00010-ABG30377 represent novel human diagnostic canno acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in effectionic format directly from WIPO at the control of the control of the control of the control of the control of the control of the control of calculation of calculation of calculation of calculation of calculations.

Claim 1; SEQ ID NO 40; 347pp; English.

or hepatitis.

```
The Invention relates to an isolated polypeptide, winch is a numan kinase and phosphataee (KPP). KPP agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of KPP, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythemia vera, psoriasis, primary thrombocytopaenia or cancer) developmental disorders (eg. renal tubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune, allergise, sathma, autoimmune thyroiditis, contact dermatitis, Crohn's inflammatory disorders (e.g. AIDS; acquired immune deficiency syndrome, allergise, sathma, autoimmune thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus, glomeriolomephritis, Goodpasture's syndrome, cout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, cout, Grave's disease, Hashimoto's thyroiditis, irritable bowel syndrome, bacterial, fungal, parasitic, protozoan or helminthic infections. The KPP contental, fungal, parasitic, protozoan or helminthic infections. The KPP contental, in gene therapy and for creating transgemic animals to model human contents. The present sequence is human KPP protein
   invention relates to an isolated polypeptide, which is a human kinase

The invention relates to a novel isolated polypeptide which is a human kingse and phosphatase (KPP). The polypeptide of the invention demonstrates cardiovascular, antiantianological to the invention antialiammatory, antianginal, antiallargic, antialiametory, antianginal, antiallargic, antialiabetic, nephrotropic, antigout, gastrointestinal, neuroprotective, cartialpatric, nephrotropic, antigout, gastrointestinal, neuroprotective, osteopathic, antiarthritic, uropathic, ophthalmological, antiparkinsonian, nootropic, antionwalsant, hepatotropic, antipsoriatic, antiparkinsonian, nootropic, antionwalsant, hepatotropic, antipsoriatic, antipacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and fungicide activities. The kinase and phosphatase (KPP) polynucleotides, polypeptides, agonists and antibacterial, virucide, protozoacide and diseases; immune system disorders, or proliferative disorders and diseases; immune system disorders, protozoan or helminthic infections. Furthermore, the molecules of the invention may be useful for creating transgenic animals to model human to be not the herapy. The current sequence is that of a human to be human and an animals to model human to be hospitally and animals to model human to be hospitally and animals to model human to be hospitally and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals and animals animals animals animals and animals animals animals and animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animals animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       242

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then by selecting a bait protein from a known adipocyte marker and then ce performing a yeast 2-hybrid selection to isolate prey proteins encoded by members of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a polypeptide in the adipocyte cells, a polypeptide encoding a polypeptide in the adipocyte cells, a ceombinant host cell expressing at least one of the interacting polypeptides of the complex, selecting a modulating compound in adipocyte cells, a SID (RTM) polypeptide comprising any of the 738 amino acid sequences given in the specification (including its fragmen to variant), a vector comprising the vector, a protein cincluding its fragmen to variant, a vector comprising the vector, a protein comprising the polypeptides and a recomblex, polypeptides, polymucleotides and compounds are useful for comprising or treating metabolic disorders such as obesity or diabetes. The polymucleotides are useful for granting or treating metabolic disorders such as obesity or diabetes. The polymucleotides are useful as probes or primers. The complex is probes or primers. The complex is carried remained drugs that medulate the protein interaction, thus complexing the therapeutic effect. The present sequence represents a SID (Rrw) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The specification describes human protein kinase/protein phosphatases. It is expected that the protein kinase/protein phosphatase gene participates in signal transduction in cells. The protein kinase/protein phosphatase polypeptides and polymucleotides are useful for developing diagnostics and treatment agents for human and animal diseases. The protein kinase/protein phosphatase polypeptides are useful as target molecules in designing novel drugs. The protein kinase/protein phosphatase polypeptides are useful as target molecules in polymucleotides are useful as a source of probes and primers, which may be used to isolate homologous sequences. The present sequence represents a human protein, which is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 MVLBNNCNVJAMITREIECGVIKCYSYWPISL-KEPLEFEHFSVFLETFHVTQYFTVRVF 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1077
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways. Antisense oligonucleotides and compounds identified by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used as target molecules fir drug development. The present sequence represents a polypeptide, used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1078 MIWEQKSTVIAMMIQEVEGEKİKCQRYWPNILGKITMVSNRLRLALVRMQQLKGFVVRAM 1137
